### ❖ What is Vector?

Vector is an object that has both a magnitude and a direction. So Geometrically, we can picture a vector as a directed line segment, whose length is the magnitude of the vector and with an arrow indicating the direction.

### ❖ Vector Space

A vector space is a set of vectors that can be added together and multiplied by scalars (real numbers) while satisfying certain axioms (e.g., associativity, distributivity, zero vector existence). A set  $V$  with addition and scalar multiplication operations satisfying 10 axioms

*Key Materials :*

- Contains zero vector  $0$
- Close under addition: If  $u, v \in V$ , then  $u + v \in V$
- Closed under scalar multiplication: If  $v \in V$ ,  $k \in \mathbb{R}$ , then  $kv \in V$

*Example :*

- $\mathbb{R}^n$  = all  $n$ -dimensional real vectors
- $M_{nn}$  = all  $n \times n$  matrices
- $P_n$  = all polynomials of degree  $\leq n$

### ❖ Linear Independence

Vectors  $\{v_1, \dots, v_n\}$  are linearly independent if the only solution to:

$$c_1 v_1 + c_2 v_2 + \dots + c_n v_n = 0$$

is  $c_1 = c_2 = \dots = c_n = 0$ .

*Key Materials :*

- Linear dependence implies at least one vector can be written as a linear combination of others.
- Linear independence means no vector can be formed from the others.

*How to check :*

- Create a matrix with the vectors as columns
- Perform row reduction (Gaussian elimination)
- If only trivial solution  $\rightarrow$  independent, If non-trivial solutions exist  $\rightarrow$  dependent

### ❖ Linear Combination

A vector  $w$  is a linear combination of vectors  $v_1, v_2, \dots, v_n$  if:

$$w = c_1v_1 + c_2v_2 + \dots + c_nv_n \text{ for some scalars } c_1, \dots, c_n \in \mathbb{R}$$

*Example:*

Is  $[2 \ 5 \ 8]$  a linear combination of  $[1 \ 0 \ 1]$ ,  $[1 \ 1 \ 1]$ ,  $[0 \ 2 \ 3]$ ?

→ Solve the system:  $c_1[1 \ 0 \ 1] + c_2[1 \ 1 \ 1] + c_3[0 \ 2 \ 3] = [2 \ 5 \ 8]$

### ❖ Proving a Linear Combination

To prove one vector is a linear combination of others, solve:

$$w = c_1v_1 + c_2v_2 + \dots + c_nv_n$$

*Example:*

Prove  $[5 \ 2 \ 4]$  is a combination of  $[1 \ 0 \ 1]$  and  $[2 \ 1 \ 1]$

→  $c_1[1 \ 0 \ 1] + c_2[2 \ 1 \ 1] = [5 \ 2 \ 4]$  → Solve the system

### ❖ Exercises and Answers

Q1. Determine if vectors  $[1 \ 2]$  and  $[3 \ 6]$  are linearly independent

→ They are dependent (second is a scalar multiple of the first)

Q2. Is  $[4 \ 5]$  a linear combination of  $[1 \ 2]$ ,  $[1 \ 1]$ ?

Solve:

$$c_1[1 \ 2] + c_2[1 \ 1] = [4 \ 5]$$

→  $c_1 + c_2 = 4, 2c_1 + c_2 = 5 \rightarrow c_1 = 1, c_2 = 3 \rightarrow \text{Yes}$

### Vector Space – Exercises

#### Question

Q1. Is the set of all  $2 \times 2$  matrices a vector space?

Q2. Is the set of all vectors in  $\mathbb{R}^3$  with zero third component a vector space?

Q3. Does the set of all polynomials of degree exactly 2 form a vector space?

Q4. Is the set of all continuous functions a vector space?

Q5. Is  $\mathbb{R}^2$  under standard addition and scalar multiplication a vector space?

Q6. Show that the zero vector is unique in any vector space.

Q7. Prove that every vector has a unique additive inverse in a vector space.

Q8. Does closure under addition imply associativity? Explain.

Q9. Is the union of two subspaces always a subspace? Justify.

Q10. Is the set of all 2D vectors with integer entries a vector space over  $\mathbb{R}$ ?

## Vector Space – Answers and Explanations

### Answers

Q1. Yes,  $2 \times 2$  matrices form a vector space under standard addition and scalar multiplication.

Explanation: They satisfy all 10 axioms of a vector space, including closure, associativity, identity, and inverses.

Q2. Yes, because they are closed under vector addition and scalar multiplication.

Explanation: The set is a subspace of  $\mathbb{R}^3$ .

Q3. No, because it's not closed under addition (sum of two degree 2 polynomials might be degree  $\leq 2$ ).

Explanation: Closure under addition fails since degree may drop.

Q4. Yes, continuous functions form an infinite-dimensional vector space.

Explanation: Operations like addition and scalar multiplication preserve continuity.

Q5. Yes,  $\mathbb{R}^2$  is a standard example of a vector space.

Explanation: All vector space axioms are satisfied.

Q6. Yes, and it's proved by assuming two zero vectors and showing they are equal.

Explanation: Let  $0$  and  $0'$  be zero vectors, then  $0 + 0' = 0'$  implies  $0 = 0'$ .

Q7. Yes, every vector has a unique additive inverse in a vector space.

Explanation: Let  $v + w = 0$  and  $v + w' = 0$ , then  $w = w'$ .

Q8. No, closure does not imply associativity; associativity is a separate axiom.

Explanation: Each axiom must be independently verified.

Q9. No, the union of two subspaces is not necessarily a subspace.

Explanation: Counterexample: x-axis and y-axis in  $\mathbb{R}^2$ .

Q10. No, because integers are not closed under scalar multiplication by real numbers.

Explanation: For example,  $0.5 * [1 \ 0] = [0.5 \ 0]$ , which is not in  $\mathbb{Z}^2$ .

## Linear Independence – Exercises

### Question

Q1. Are  $[1 \ 0]$ ,  $[0 \ 1]$  linearly independent?

Q2. Are  $[2 \ 4]$ ,  $[1 \ 2]$  linearly independent?

Q3. Determine if  $[1 \ 2 \ 3]$ ,  $[4 \ 5 \ 6]$ ,  $[7 \ 8 \ 9]$  are linearly independent.

Q4. Can three vectors in  $\mathbb{R}^2$  be linearly independent?

Q5. Can the zero vector be part of a linearly independent set?

Q6. If  $\{v_1, v_2\}$  is linearly dependent, what does it mean?

Q7. Are the columns of the identity matrix linearly independent?

Q8. Determine if vectors  $[1 \ -1 \ 0]$ ,  $[2 \ 1 \ 1]$ ,  $[3 \ 0 \ 1]$  are dependent.

Q9. Show that any set with more vectors than the dimension is dependent.

Q10. Are  $[1 \ 1 \ 0]$ ,  $[2 \ 2 \ 0]$ ,  $[0 \ 0 \ 1]$  independent?

### Linear Independence - Answers and Explanations

#### Answer

Q1. Yes, they are independent.

Explanation: Each cannot be written as a scalar multiple of the other.

Q2. No, because  $[2 \ 4] = 2 * [1 \ 2]$ .

Explanation: They are linearly dependent.

Q3. No, determinant is 0  $\rightarrow$  dependent.

Explanation: The rows are linearly dependent.

Q4. No, maximum number of independent vectors in  $\mathbb{R}^2$  is 2.

Explanation: More than 2 vectors in  $\mathbb{R}^2$  are always dependent.

Q5. No, a set containing the zero vector is always dependent.

Explanation:  $c=1$  for zero vector gives non-trivial solution.

Q6. It means at least one vector is a scalar multiple of the other.

Explanation: That's the definition of dependence for two vectors.

Q7. Yes, because each standard basis vector is independent.

Explanation: Each has a unique 1 in one coordinate.

Q8. Yes, they are linearly dependent.

Explanation: Row reduction yields a free variable.

Q9. Yes, it's a fundamental theorem in linear algebra.

Explanation: In  $\mathbb{R}^n$ , any set of  $>n$  vectors is dependent.

Q10. No, because  $[2 \ 2 \ 0] = 2 * [1 \ 1 \ 0]$

Explanation: The first two vectors are dependent, so the whole set is.

### Linear Combination - Additional Exercises

Q1. Is  $[3 \ 4]$  a linear combination of  $[1 \ 0]$ ,  $[0 \ 1]$ ?

Q2. Can  $[2 \ 2]$  be written as a combination of  $[1 \ 1]$  and  $[1 \ -1]$ ?

Q3. Write  $[2 \ 3 \ 4]$  as a combination of  $[1 \ 0 \ 0]$ ,  $[0 \ 1 \ 0]$ ,  $[0 \ 0 \ 1]$ .

Q4. Express  $[5 \ 2 \ 4]$  using  $[1 \ 0 \ 1]$  and  $[2 \ 1 \ 1]$ .

Q5. Is  $[4 \ 4]$  in the span of  $\{[1 \ 2], [2 \ 1]\}$ ?

Q6. Determine  $c_1, c_2$  such that  $c_1[1 \ 1] + c_2[2 \ 1] = [5 \ 3]$

Q7. Can  $[6 \ 8]$  be written as a combination of  $[2 \ 3]$  and  $[1 \ 2]$ ?

Q8. Find a combination of  $[2 \ 1 \ 0]$  and  $[1 \ 2 \ 0]$  that gives  $[5 \ 4 \ 0]$ .

Q9. Are  $[3 \ 2]$ ,  $[1 \ 0]$  sufficient to express  $[4 \ 2]$ ?

Q10. Use linear combination to determine if  $[5 \ 7]$  is in  $\text{span}\{[1 \ 1], [2 \ 3]\}$ .

### Linear Combination - Answers and Explanations

### Answer

Q1. Yes, because  $[3\ 4] = 3*[1\ 0] + 4*[0\ 1]$

Explanation: It is a combination of standard basis vectors.

Q2. Yes,  $[2\ 2] = 1*[1\ 1] + 0*[1\ -1]$

Explanation: Solve system of equations.

Q3. Yes, just use coefficients as  $[2\ 3\ 4] = 2*[1\ 0\ 0] + 3*[0\ 1\ 0] + 4*[0\ 0\ 1]$

Explanation: Standard basis expansion.

Q4. Yes, solution:  $[5\ 2\ 4] = 1*[1\ 0\ 1] + 2*[2\ 1\ 1]$

Explanation: Solving the linear system gives coefficients.

Q5. Yes, solve:  $a*[1\ 2] + b*[2\ 1] = [4\ 4]$

Explanation: It has a solution ( $a=0.8$ ,  $b=1.6$ ).

Q6.  $c_1 = 1$ ,  $c_2 = 2$

Explanation:  $1*[1\ 1] + 2*[2\ 1] = [5\ 3]$

Q7. Yes, use system of equations to verify.

Explanation: Solution exists:  $a=2$ ,  $b=0$ .

Q8.  $a = 1$ ,  $b = 1$

Explanation:  $1*[2\ 1\ 0] + 1*[1\ 2\ 0] = [3\ 3\ 0]$

Q9. Yes,  $a = 1$ ,  $b = 1$

Explanation:  $[3\ 2] = [1\ 0] + [2\ 2]$

Q10. Yes,  $[5\ 7] = 1*[1\ 1] + 2*[2\ 3]$

Explanation: Check by substitution.

### Proving a Linear Combination - Additional Exercises

#### Question

Q1. Prove  $[3\ 5]$  is a combination of  $[1\ 2]$  and  $[2\ 1]$ .

Q2. Show  $[7\ 8\ 9]$  can be formed from  $[1\ 0\ 1]$ ,  $[1\ 1\ 1]$ ,  $[0\ 2\ 3]$ .

Q3. Is  $[5\ 2\ 4]$  a combination of  $[1\ 0\ 1]$  and  $[2\ 1\ 1]$ ?

Q4. Demonstrate that  $[4\ 4]$  is a combination of  $[1\ 2]$  and  $[2\ 1]$ .

Q5. Prove  $[0\ 0\ 1]$  is not in the span of  $\{[1\ 0\ 0], [0\ 1\ 0]\}$

Q6. Show that  $[6\ 7]$  is a combination of  $[2\ 3]$  and  $[1\ 2]$

Q7. Is  $[3\ 6]$  in the span of  $\{[1\ 2], [1\ 1]\}$ ?

Q8. Show how  $[4\ 6]$  can be expressed from  $[2\ 3]$  and  $[1\ 1]$

Q9. Find scalars  $a$ ,  $b$  so that  $a[1\ 1] + b[2\ 1] = [5\ 3]$

Q10. Can  $[10\ 10]$  be written as a combination of  $[2\ 3]$  and  $[3\ 2]$ ?

### Proving a Linear Combination - Answers and Explanations

#### Answer

Q1. Yes,  $[3 \ 5] = 1*[1 \ 2] + 1*[2 \ 1]$

Explanation:  $1*[1 \ 2] + 1*[2 \ 1] = [3 \ 3]$

Q2. Yes,  $[7 \ 8 \ 9] = 2*[1 \ 0 \ 1] + 3*[1 \ 1 \ 1] + 1*[0 \ 2 \ 3]$

Explanation: Solve the system.

Q3. Yes,  $[5 \ 2 \ 4] = 1*[1 \ 0 \ 1] + 2*[2 \ 1 \ 1]$

Explanation: Same as previous example.

Q4. Yes,  $a = 0.8$ ,  $b = 1.6$

Explanation: Satisfies linear combination equation.

Q5. No,  $[0 \ 0 \ 1]$  cannot be formed by  $[1 \ 0 \ 0]$  and  $[0 \ 1 \ 0]$

Explanation: Missing third dimension.

Q6. Yes,  $a=2$ ,  $b=1$

Explanation:  $[6 \ 7] = 2*[2 \ 3] + 1*[1 \ 2]$

Q7. Yes,  $a=3$ ,  $b=0$

Explanation:  $[3 \ 6] = 3*[1 \ 2] + 0*[1 \ 1]$

Q8. Yes,  $a=1$ ,  $b=2$

Explanation:  $[4 \ 6] = 1*[2 \ 3] + 2*[1 \ 1]$

Q9.  $a=1$ ,  $b=2$

Explanation: Check:  $1*[1 \ 1] + 2*[2 \ 1] = [5 \ 3]$

Q10. Yes,  $a=2$ ,  $b=2$

Explanation:  $2*[2 \ 3] + 2*[3 \ 2] = [10 \ 10]$
